

**Cardio-Pulmonary  
Program Objectives:**

- . Reduce 30-Day Re-hospitalizations
- . Early identification of change in condition
  
- . Includes patients in program within calendar month

In partnership with PEL/VIP

**PEL VIP RHIP Corporate Outcomes**  
Cardio-Pulmonary Participant Report  
August 2024

**National Average for  
Re-Hospitalization Rates\*:**

- . All-cause: 15%
- . CHF: 21.3%
- . COPD: 19.8%
- . Pneumonia: 16.7% (current rate not available)

\*medicare.gov

**Results Summary: 1719 Total Participants**

Diagnosis Summary: Pneumonia - 350 High Risk, 0 Low Risk; CHF - 983 High Risk, 5 Low Risk; COPD - 857 High Risk, 2 Low Risk; Respiratory Complex - 226

\*Patients may qualify for more than one program

Program vs. 30-Day National Average

- 8.49% rate of readmission for any reason
- 1.92% of short stay participants were re-hospitalized for a cardio-pulmonary reason
- 26.47% rate of successful discharge to community
- 14.66% successfully completed 30-day program
